*Mg/Svg/Pkg is calculated based on the mass/density of the dominant suspension or the total fill weight of the package.

Potency test results are reported in percentage by dry weight using High Performance Liquid Chromatography (HPLC). Detectable amounts below .06% are shown as TR (trace) or <LOQ. Our standard detection limit is .02%. Results below .02% are considered unreliable and are reported as zero (0.00) or Not Detected (ND). Our deviation is within the industry standard for HPLC.
